Project description:

With this project GLSMED Learning Health, SA intends to set up a new establishment.

In this new establishment the company intends to set up a simulation hospital and start operating in two new fields – training and research.

The main focus of this hospital will be the generation of new clinical knowledge, the development and implementation of innovative procedures and techniques, and the training of national and international health professionals.

The simulation hospital will be the first in the country to integrate various specialties and procedures in one place and systematically monitor its trainees' performance. To this end, the supported investment includes mainly simulation equipment, but also monitoring equipment and software, and e-learning and b-learning platforms.

GLSMED Learning Health, SA strategic goals in setting up this Simulation Hospital are:

- Sustainable growth in turnover, including exports
- Train health professionals
- Participate in research projects
- Support the development of startups in the health sector
